

Reflective Writing

Write a reflective writing section in your ePortfolio. Your writing should address the following:

- What did you learn from this course or assignment and why do you consider it valuable? (for example, how might what you have learned affect future courses, your career, hobbies?)
- How does this course connect with what you learned in other Gen Ed courses? (for example, are there connecting concepts, similar study habits needed, etc.)

Please note that the reflective writing is **not** whether or not you liked the instructor, the class, or the assignment. Look at the questions above. How does/will knowing more or studying about astronomy affect you in the future? Look beyond the General Education checklist and see how you have benefitted by taking this course.

1. I learned so many things I will take with me to the future! I am amazed by the information I learned from taking an astronomy class at Salt Lake Community College. I was given the tools to stay up to date with what is going on in space today. I am in love with [nasa.gov](https://www.nasa.gov). I really enjoyed watching astronauts live for credit on a few of my assignments. I was required to write about recent astronomy news every week. I learned what I am witnessing when I am looking at the moon and the stars at night.
2. I think this is a great Gen Ed course because everyone should learn about the earth, sun, and solar system we live in! This has increased my level of excitement about life! I am so grateful for this class for giving me an understanding of our universe. I will continue to be interested in our endless and infinite universe and I look forward to seeing what is out there!! I will always think of what I learned here in this astronomy class every night for as long as I am alive!
